

Oracle APEX Training

Learn from Industry Experts

VISCOSITY
NORTH AMERICA

Viscosity's Oracle APEX training classes are designed & delivered by some of the best APEX experts in the industry

Oracle APEX Training

Overview

You wouldn't want to learn how to paint from someone who has never picked up a brush. So why learn Oracle APEX from someone who has never built a single production application with it? When you take a class from Viscosity, you'll always get an instructor who has years of real-world experience developing and deploying mission-critical production applications with Oracle APEX across all verticals. Thus, you'll learn from one of the best.

A Hands-On Approach

We believe that the best way to learn is by doing. That's why most of the content in our classes is hands-on. In addition to the slides used for a class, each student will receive a detailed workbook that outlines the class exercises step-by-step. So if you have to step out of the class for a call or want to re-do the class on your own time, you have all that you'll need.

Onsite or Online

If you have a group of developers that need training, we can come onsite and deliver it there. Or, if you're a smaller shop or individual, you can enroll in one of our online public classes. In either case, you get the same great content delivered live from our instructors.

Custom Curriculum

One of our most popular offerings is our custom curriculum. We'll sit down with you and design a custom course based on your actual requirements. The custom course will focus on how we would analyze, architect and develop a solution to solve your specific problem with Oracle APEX. At the conclusion of the class, you'll have a working APEX application and one less problem to worry about.

Introduction to APEX

This three-day class is aimed at those brand new to APEX. It will walk students through the fundamentals of the tool by building a working project management solution. It will also cover all of the basic components of APEX, giving students a broad overview of APEX's low-code capabilities.

Secure APEX Development

In Secure APEX Development, we'll cover all things security and how they relate to APEX. Core APEX components - such as authentication and authorization schemes, session state protection, item encryption and access control are covered, as well as Oracle Database security features such as VPD, Redaction, Label Security & Auditing.

Troubleshooting APEX

Oracle APEX is a mix of a number of different technologies - SQL, PL/SQL, CSS, HTML and Javascript. Thus, troubleshooting issues largely relies on knowing where to look. This class will cover how to effectively diagnose and resolve issues in an APEX application.

APEX for the DBA

If you're a DBA in an APEX shop, it's your job to manage it. Learn what you need to know to manage APEX correctly in this one-day class that covers not only the administration side of APEX, but also discusses installation options, web server configuration, ORDS and more.

Advanced Topics

We have a wide range of more advanced topics - printing, charts, dashboards, web services, Javascript, dynamic actions, universal theme, CSS - just to name a few. If you don't see what you need, please contact us and we'd be happy to discuss your specific needs.
