

Viscosity Public & Private Cloud

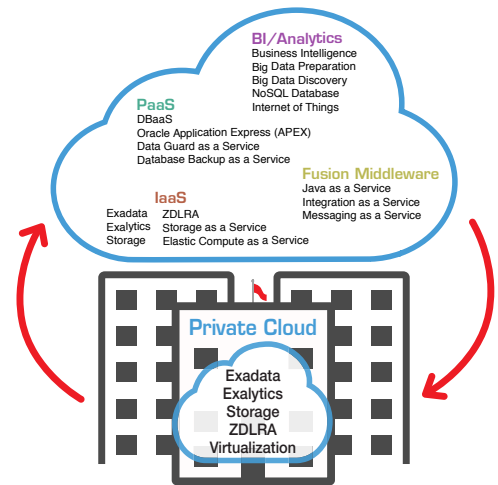

“Viscosity has earned their place as a most valued Partner for our IT department. Their professionalism and dedication allowed us to meet our commitments to internal business units, and provide a better performing, better architected system.”

- Senior Director,
IT McAfee, Inc.
(an Intel Company)

Leveraging Viscosity North America’s expertise in Public and Private Cloud Architecture allows corporations and CIO’s the confidence in delivering best of breed technologies and solutions that drive lower cost in new technology adoption while delivering significant savings of operational expenditures.

Significantly improve how you deliver secure information, technology, and services with cloud computing by providing on demand access to a shared pool of computing resources in a self-service, dynamically scaled and metered manner.

Customers immediately benefit from Viscosity’s Cloud solutions with:

Speed. IT resources are able to scale out and in quickly on an as needed basis, thus eliminating the need to purchase additional hardware and resources.

Agility. Computing services are delivered over standard networks and heterogeneous devices. IT resources are shared across multiple applications and tenants in a non-dedicated manner. IT resource utilization is tracked for each application and tenant, typically for public cloud billing or private cloud chargeback.

Efficiency. On-demand self service provides users to provision, monitor, and manage computing resources as needed without the help of human administrators.

Security. Securely move data in and out of the public cloud with confidence and peace of mind.

Whether your needs are Cloud, Database, or both technologies and services for Oracle Exadata, RAC, EMC, VCE, SQL, VMWare or Oracle VM, when you lean on Viscosity, you are partnering with genuine experts and acclaimed authors of industry best practices.
